ACADEMIC/PERSONAL PROJECTS

Travel Website

- Developed an object-oriented Java application using Spring Framework that was integrated with an existing angular front end and MySQL Database.
- Created entity classes, DAO interfaces, Services Packages, Input validation, and REST Controllers.

Password Generator

- Created a Java program that generates secure passwords of varying complexity levels.
- Implemented features to prompt user input to enhance user customization of passwords.

Personal Website

- Worked in HTML and CSS to create a user-friendly, visually appealing platform.
- Designed and developed a personalized website to showcase my skills and provide additional information about myself.

Database Roster Transfer

- Worked in C++ to create a project to help mitigate an existing student database to a new platform.
- Designed and implemented a solution that allows for a smooth transfer of data by analyzing requirements and limitations.
- Demonstrated a strong understanding of data structures and algorithms by ensuring the accuracy and integrity of data during the mitigation process.
